Web Technologies

Project 1 (html, Css, Js,) before mid

Project 2 (Js, React, Api, Dashboard) Before Final Exam

No.	Course Learning Outcome (CLO)
CLO1.	**Understand** Fundamentals of Modern Web Development Languages, Tools, Communication Media, Architectures, and Web Application Deployment
CLO2	**Demonstrate** the ability to develop professional front-end applications using client-side technologies such as HTML, CSS, and JavaScript.

Project 1 Brief

1. Assignment 1 deadline: Part 1 (pages 1 to 3), handwritten sheet (28-10-26) Time 11:59pm.
2. Assignment 2 deadline: Part 2 (pages 4 to 6), handwritten sheet (10-11-26) Time 11:59pm.
3. Project Phase 1: (Assignment 1 + Assignment 2) full demo and viva (13/11/26) office timings.

AI declaration and ground rules

AI tools are allowed in this project, but only as a tutor: the learning, the design choices and the presentation must be yours.

1. AI for planning AI may be used to brainstorm, structure

and locate material. All drafting and analysis are the student's own.

Disclosure statement naming tools and prompts

- **Allowed:** asking AI to draw a plan/roadmap, find the cause of an error, suggest ideas, or check spelling.
- **Not allowed:** submitting pages you cannot explain line by line or rebuild without help.
- **Logged:** every AI use is written in an "AI usage log" in the README (tool, what you asked, what you changed).
- **Checked:** in the viva, any line of your code can be picked and you must explain it.

Copy this declaration by hand at the top of your handwritten Assignment 1 and Assignment 2 sheets:

> *I, [full name], roll no. [roll no.], declare that I used AI tools [not at all / only for: _____]. This project is for my own learning. I understand every line of my code and can explain and recreate it without help. Signature and date:_____*

Project overview

This is a solo project: each student builds one themed multi-page website of 5 to 6 pages, where every page has its own stylesheet and practises a different set of HTML and CSS3 concepts.

- **Theme:** choose your own (café, gym, travel agency, university society, personal portfolio) or follow the route you get approved below. Write your own text and code.
- **Tools:** plain HTML, CSS and a little JavaScript in VS Code; Git and GitHub for version history.
- **Goal:** by the end you can lay out a page with flexbox and grid, make it responsive with media queries, and animate it with CSS3.
- **Marks:** 20 in total, delivered in two parts (Assignment 1 and Assignment 2) and demonstrated at Project Phase 1.

Starting point and teacher approval

Each student picks A/B as starting routes, and no coding starts until the teacher approves the plan and its depth.

Route	What it means	Bring for approval
A. Recreate a WordPress site or theme	Pick a live WordPress site or demo theme and rebuild its look and layout by hand in static HTML, CSS and JavaScript. Do not export or upload theme files.	Link to the site or theme, plus screenshots of the 5 to 6 pages you will rebuild
B. Design from scratch	Draw a Figma wireframe of every page first, then build the site from your own design.	Figma link with wireframes of all pages

- **Approval meeting:** a short discussion with the teacher to agree the pages, the CSS concepts for each page, and how deep the project goes. The teacher may ask you to add or cut scope, before (26/10/2026).
- **Record:** save the approval (a signed sheet or email screenshot) and link it in the README. Your first commit comes after the approval date.
- **Solo work:** one repository per student, no shared code. Similar projects are questioned in the viva.
- **Route A rules:** the page requirements below still apply. If the original site lacks a required concept (for example grid or keyframes), add it yourself. Write your own text,

and use your own or properly licensed images. student must able to explain the runtime changings in the viva.

- **Route B rules:** the final pages must follow Figma wireframes at least 6 pages; student must able to explain the runtime changings in the viva.

Webpage requirements

Build at least these six pages (five is the minimum), each linked to its own `.css` file and each showing a different layout technique.

#	Page	Part	Own stylesheet	HTML must include	CSS to practise
1	Home (`index.html`) or any	Assignment 1	`home.css`	Headings, paragraphs, block and inline elements, an image, links to every page	Element, class and ID selectors; text and font properties; borders; background colour
2	Media and info (`media.html`) or any	Assignment 1	`media.css`	Image, video, audio, ordered and unordered lists, one data table	Box model (width, height, margin, padding, box-sizing); background image; display, position, float, overflow
3	Register (`register.html`) or any	Assignment 1	`register.css`	Form with text, password, email, date, url, color, number, time, range, textarea, select, file, radio, checkbox; `required`, `readonly`, `disabled`, `min`, `max`, `minlength`, `maxlength`, `checked`, `selected`	Attribute selectors, combinators, pseudo-classes (`:hover`, `:focus`, `:valid`, `:invalid`), pseudo-elements

#	Page	Part	Own stylesheet	HTML must include	CSS to practise
4	Services (`services.html`) or any	Assignment 2	`services.css`	Card list with image, heading, text and link	Flexbox (wrap, justify, align, gap); transform; transition on hover
5	Portfolio (`portfolio.html`) or any	Assignment 2	`portfolio.css`	Image gallery with captions	CSS Grid (`grid-template-areas` or `auto-fit`); `@keyframes` animation; at least two media-query breakpoints
6	Contact (`contact.html`) or any	Assignment 2	`contact.css`, `contact.js`	About section and contact form	Responsive layout mixing flexbox and grid; media queries; one small DOM script (show/hide, live form check or theme toggle)

Common rules for every page:

- A navigation bar linking all pages, restyled differently on each page through that page's own stylesheet.
- No inline styles and no copy-pasted stylesheet; each file must be visibly different.
- Use CSS3 features where they fit: gradients, `box-shadow`, `border-radius`, `rgba()` colours, web fonts.
- Valid, indented HTML with meaningful file and class names.

Two parts: Assignment 1 and Assignment 2

The project 1 is split in half, so each half is submitted and marked separately (10 marks each).

	Part 1: Assignment 1	Part 2: Assignment 2
Pages	1 to 3: Home, Media and info, Register	4 to 6: Services, Portfolio, Contact
Course topics	HTML elements, text, media, lists, tables, form fields and validation attributes, CSS syntax and selectors, text and font, border, box model, background, display, position, float, overflow	Flexbox, transform, transition, animation, grid and responsive design, media queries, JavaScript basics and DOM
Handwritten sheet (must)	AI declaration, page list, and 3 code snippets you wrote, each explained in your own words	AI declaration, page list, and 3 code snippets you wrote, each explained in your own words
GitHub	Repository link with commits up to the `assignment-1` tag	Same repository, commits up to the `assignment-2` tag
Marked at	Assignment 1 deadline	Assignment 2 deadline, then full demo at Project Phase 1

Submission rules: handwritten sheet and GitHub history

GitHub commit history is worth 20% of the project (4 of 20 marks, 2 per part), and a single commit scores 0 for that component.

Each part is submitted two ways: the handwritten sheet in class, and the GitHub repository link.

- Use one public or teacher-shared repository named `web-project-<rollno>`.
- Commit as you build, with messages that say what changed (for example "Add flexbox card layout to services page").
- Tag the repository `assignment-1` and `assignment-2` when each part is done; only commits before the tag count.
- Do not delete the repository, squash history or force-push after the deadline; the timeline is the evidence.
- The README lists your theme, the pages, and your AI usage log.

Project 1 marks for GitHub (out of 2):

Commit history	Marks
One commit, or all files uploaded at once	0
Fewer than 8 commits, or nearly all on one day, or vague messages ("update", "final")	1
8 or more commits over at least 4 different days, each with a meaningful message	2

Marking rubric (20 marks)

The project carries 20 marks, 10 for each part.

Criterion	Part 1	Part 2	Total as project 1	Full marks when
GitHub commits and timeline	2	2	4	8+ meaningful commits over 4+ days per part; 0 for a single commit
HTML structure and forms	2	1	3	Correct tags, semantic structure, all required inputs and validation attributes
CSS concepts, one stylesheet per page	2	2	4	Each page uses its own required selectors and properties; no copied stylesheets
Layout and responsiveness	1	2	3	Display, position and float in Part 1; flexbox, grid and media queries in Part 2
CSS3 effects	1	1	2	Gradients, shadows, transform, transition and keyframe animation used purposefully
Handwritten sheet and AI declaration	1	1	2	Declaration copied, page list complete, 3 snippets explained in own words
Presentation and viva	1	1	2	Clear 5-minute demo and correct answers about own code
Total	**10**	**10**	**20**	

Presentation and viva

Each student gives a 5-minute demo of the site on their own laptop, then answers 2 to 3 questions about their own code.

- Show the six pages, resize the browser to prove responsiveness, and open the GitHub commit history.
- Be ready to explain any selector, any layout property and any commit.
- Sample questions: Why did you use grid here and flexbox there?
- What does `box-sizing: border-box` change? Which commit added your media query, and why?

Checkpoints:

4. Assignment 1 deadline: Part 1 (pages 1 to 3), handwritten sheet (28-10-26) Time 11:59pm.
5. Assignment 2 deadline: Part 2 (pages 4 to 6), handwritten sheet (10-11-26) Time 11:59pm.
6. Project Phase 1: full demo and viva (13/11/26) office timings.

---

1) Get the approval from teacher by sharing sample design via email or teams
2) Push code on daily bases with updated commit to GitHub
3) Create hardcopy of the work on daily bases write code on A4 sheets and sign each page with your initials as writing in one go will be difficult for you (50% submission marks of assignment depend on hand written sheets).
